

Form and function in perfect harmony

Focused on improving the speed and reliability of card transactions in forecourt sales, the latest terminal package from RSM2000 cuts real world transaction times in half.

What's more... behind the new terminal is a highly competitive card scheme from a leading provider of fast, secure electronic payment services...

the future of forecourt transaction processing has arrived.

The NEW, whisper-quiet, fanless terminal accepts a wide range of payment, fuel, and bunker cards, as well as enabling telephone card top ups.

The sleek, durable, small footprint body encases a highly efficient Intel 1.6GHz Atom Processor and superfast broadband connectivity, allowing transactions to be processed faster than ever before.

Attention to detail in the design of both the hardware and the embedded software has created a reliable, intuitive, easy to use interface which minimises the need for staff training.

The 10" touch screen features an on-screen QWERTY keyboard, when required, ideal for entering additional information such as mileage and registration numbers.

An integral part of the terminal package is a new generation compact thermal printer which delivers almost instant receipts whilst providing top image quality, enhanced reliability and reduced printing costs.

Transactions are captured in real-time within RSM2000's secure processing environment, so no card data is held within the terminal or at the forecourt site - significantly simplifying PCI-DSS compliance and effectively future proofing your installation.

In conjunction with the new terminal package RSM2000 have developed a highly competitive

card processing scheme, specifically designed to meet the needs of independent forecourt operators, featuring:

- No administration fee
- Card processing rates of less than 1%
- Terminal rental and purchase options
- Full PCI-DSS compliance
